

MAINTENANCE SCAFFOLD SPECIALISTS

The cost implications of time delays can be massive. So choose Linkforce, the maintenance scaffold specialist. With our own fleet of modern equipment, experienced personnel and logistics control, we complete your time-critical scaffold with optimal efficiency.

Even more so, with our highly skilled labour force committed to OHS, we rapidly respond to your project needs in a safe and timely manner. No matter the scale or the location, we ensure safety is the top priority.

TRUSTED EXPERIENCE

With Linkforce Engineering, no job is too large or too small and complexity is never an issue. We thrive on challenge, utilising our extensive experience to deliver a turnkey solution. With our head office in Perth, we're also on the ground in multiple locations throughout Western Australia.

Our own workforce and fleet of modern equipment are always ready to go, wherever and whenever you require. With this integrated capability, we tailor a solution for each project, assembling a specialist workforce from our team of experienced tradespeople and management. Our leadership skills and site experience represent vital assets for your project, ensuring all work is completed on time, safely and efficiently.

LINKFORCE ENGINEERING

SAFE. VERSATILE. EFFICIENT.

The proven systems implemented by Linkforce Engineering are designed to optimise productivity. However, at the same time, our operational focus is constantly committed to an important goal of zero harm to people, the environment and local communities. We consider sustainable environmental outcomes and quality performance as essential components to success, with the health and safety of all personnel of fundamental importance.

Leadership at Linkforce isn't the sole responsibility of senior management – every employee is a leader in their respective field. As a group, we're renowned for overcoming the toughest challenges, always finding innovative, cost-effective solutions to ensure productivity is optimised.

To discuss a tailored, cost-effective solution from a proven performer, contact Linkforce Engineering.

OPTIMISING PRODUCTIVITY

SCAFFOLDING MAINTENANCE SERVICES

OUTSTANDING PERFORMANCE

Linkforce Engineering's Scaffold division is an industry leader in the highly competitive scaffolding field, thanks to a relentless commitment to Safety, Quality and Productivity. Our team of skilled and experienced professionals specialise in shutdown maintenance, offshore oil and gas, and commercial and industrial project works. Linkforce's professional and personalised approach, coupled with its proven ability to self-manage any sized scaffolding project – from design and planning through to execution – has earned it a position at the forefront of scaffolding solutions, particularly for the resources industry.

LINKFORCE ENGINEERING

Professional access and scaffolding solutions for mining, construction and all maintenance scenarios:

- Shutdown scaffolding solutions
- Construction scaffolding solutions
- Long term maintenance providers
- Turnkey scaffolding project management
- Specialists in reducing working at heights
- Mobile scaffolding solutions

INTEGRATED ENGINEERING SERVICES

With our own highly skilled workforce, scaffold equipment, plant and transport logistics – we can plan and deliver any project, large or small.

ACCESS SCAFFOLDING

Linkforce Engineering is a specialist provider of integrated scaffolding and access solutions. We can design, engineer and construct any scaffold system to suit your project.

Furthermore, with our purpose-built cube-containers, we offer a range of conventional scaffolding solutions which can be mobilised and at your site with ease.

REDUCING WORKING AT HEIGHTS WITH ADDITIONAL TOOL TIME

Linkforce Scaffolding have a proven track record in providing bespoke scaffolding solutions, with the emphasis on reducing the need to work at heights. The additional benefits of this are increased tool time, the potential to carry out opportune repairs and improved reliability.

As a specialist in the use of Layher Allround scaffolding equipment; a unique ring-lock scaffolding system that is light weight and includes rated anchor points and load bearing braces, Linkforce have identified vast time and cost saving benefits when compared to Kwikstage scaffolding and conventional Tube & Fitting. By using Layher Allround we are reducing build times by up to 80% in comparison to Tube & Fitting, and up to 40% reduction in build time when compared to Kwikstage. These time efficient solutions dramatically minimise loss of production which in turn yield significant cost savings.

LINKFORCE ENGINEERING

HOW CAN YOU BE CERTAIN YOU'LL BE READY AFTER SHUTDOWN?

CHOOSE LINKFORCE.

FLEXIBILITY AND RELIABILITY

With our modern fleet of vehicles and our plant equipment based in depots throughout WA, we avoid reliance on outside resources. As such, we're always certain of our delivery capabilities, timeframes and costs. Total equipment ownership, coupled with our experienced workforce, provides the flexibility to allocate resources when and where they are required.

PROVEN SCAFFOLD PERFORMANCE

Regardless of the scope – and always with a focus on quality and safety – we'll exceed your scaffolding requirements and expectations in the most timely and cost-effective manner. We deliver on this promise through:

- Best practice health and safety standards
- Highly talented and experienced workforce
- Providing WA's ultimate scaffolding workforce in the use of the most time-efficient scaffolding system in the world.
- Dedicated logistics services.
- Intensive Scaffold planning and design capabilities.

MAINTENANCE ACCESS SOLUTIONS: INVENTIVE, BESPOKE AND EFFICIENT

Our reputation for being Western Australia's leading mine site maintenance service provider, highlights the experience of our leaders who can identify, plan and execute plant repair and maintenance with minimal downtime and interruption.

As a leading supplier of scaffolding solutions we pride ourselves to being integral to the client's team, whilst working autonomously through experience to achieve critical deadlines.

Our Scaffolding leadership group are experienced in multidiscipline shutdown environments, with the value added benefit we recognise and understand the requirements of mechanical and operational needs, and the ability to evolve to emergent work.

CONSTRUCTION SERVICES

Our approach is to be fully integrated into the client's construction programme. It is a well documented fact that a well-managed scaffold provider can assist in the delivery of safe, timely and efficient project.

Linkforce Scaffolding draws from a wealth of experience within our leadership group to support all construction related scaffolding and temporary works requirements. With access to our engineering division we are able to supply not just scaffolding but temporary works for formwork, lifting, logistics and long term labour and material hire.

CONTAINER BASED PORTABLE SCAFFOLDING EQUIPMENT

Linkforce Scaffolding has a unique approach to supplying scaffolding material, rather than supply material on a long term hire agreement where maintenance is built into the agreement.

- Linkforce Scaffolding can manage our shorter term or project tasks in a series of 40ft containers. With this option we can mobilise and demobilise extremely quickly to the task area and around the site.
- Our "equipment to work front approach" can greatly improve tool time, work efficiency and productivity by placing scaffolding material within close proximity to the work face minimizing transport time on site. This equates to an estimated time saving of up to 3 hours per day per team.
- Potential reduction in maintenance costs and damage to scaffold equipment. Material stored inside the scaffold container reduces the cost of onsite audits, fencing, maintenance and damaged equipment. If the solution is to bring in the materials when needed, then a further reduction in losses and damages can be controlled.
